

“

Engineered for the fastest run, built to set the record.

Propulsion System

- **The Nozzle Design:**
converging nozzle to maximize the conversion of 10 bar pressure into 2.7 m/s average speed.
- **Compact & Lightweight**
Engineered for optimal weight and speed

Cart Specifications

- Mass: 2.7 Kg
- Avg speed : 2.7 m/s
- Propulsive system with 5 mm converging nozzle
- Braking system directly on the wheels
- Power supply : 4 batteries

“

The air around you is the fuel of tomorrow. We're just the first to master it.

Project features

- **Pneumatic Power:** Engineered to convert 10 bar of pressure into immediate kinetic thrust via a precision-machined nozzle.
- **Structural Integrity:** A robust steel chassis designed using thick cylinder theory to ensure safety and durability under maximum pressure.
- **Precision Control:** Integrated wireless subsystem for remote operation and active braking management.
